

TRILOBITE[®]
MOTORCYCLE JEANS

COLLECTION 2026

COLLECTION 2026

Welcome to the world of Trilobite® Motorcycle Jeans!

Riding a motorcycle is more than a journey, it is a statement of freedom, adrenaline, and style. Since 2012, Trilobite® Motorcycle Jeans have empowered riders to push boundaries without compromising on safety, comfort, and fashion. Over these fourteen years, our commitment has always been to blend maximum protection with street-ready design, ensuring that every ride you take is both secure and confident.

In 2024, we shook the motorcycle jeans industry with the introduction of our monolayer AAA certified TRI-STRETCHER® 5.0 fabric. An innovation so revolutionary that it felt like the Big Bang of motorcycle denim. By 2025, we expanded this breakthrough fabric across Trilobite® collection, pushing every pair of Trilobite® jeans to new standards of impact resistance, abrasion control, and wearability. Riders discovered that protection doesn't need to be bulky and that real freedom comes from gear you can trust as much as you trust the road.

Crafted in the heart of Europe, each pair of Trilobite® Motorcycle Jeans represents a fusion of tradition and innovation. At Trilobite®, we believe that innovation challenges the standards, and we in 2026, we proudly stand at the edge of motorcycle jean evolution. Until now, the highest benchmark for motorcycle protective gear has been the AAA standard, but our material and technology performance far exceed even that. By applying a straightforward mathematical calculation to existing AAA tests, we established our own non-official "AAAA" standard - quadruple A - raising the bar for what motorcycle jeans can achieve. This new designation is not just marketing language, it shows how **TRI-STRETCHER® 5.0** delivers exponentially greater abrasion resistance and tear strength compared to other AAA fabrics. In fact, our **Parado jeans are now the first in the world to carry this AAAA** non-official safety label. We prove that when we challenge existing boundaries, riders benefit from absolutely superior protection.

In Trilobite®, we don't just understand motorcycle jeans, we define them for the modern rider. Whether you are carving through mountain switchbacks, cruising in the city, or simply making a statement on two wheels, our 2026 collection stands as an evidence of what is possible when passion for riding meets dedication to safety.

CAUTION:

Once you experience Trilobite® Motorcycle Jeans, every other motorcycle jeans will feel like a compromise. Prepare to ride into a new era of performance, protection, and unmistakable style.

„Every day at Trilobite® Motorcycle Jeans we push the limits of protective denim. This year, we raised the bar even further by defining our own standard, because existing benchmarks simply are not enough. We have gone beyond the best and redefined the maximum. **Our AAAA standard and the new Parado AAAA jeans.** Through over a decade of innovation we have engineered the gear that surpasses every test and never compromises on comfort or style. We are committed to giving you jeans that protect when it matters most and enhance your ride from the first kilometer to the last. Ride with confidence knowing you have the world's most advanced motorcycle jeans backing you.“

TRI-STRETCHER® PRO 5.0 DENIM is a modern fabric which is the future of riding. Made from a mix of Materials from the polyamide family like Nylon and aromatic polyamides like Aramids or polyurethane made from Elastane, which includes natural cotton fabric. That's unique for its amazing strength while still being light in weight. TRI-STRETCHER® PRO 5.0 DENIM is one clever „team“ of different fibers woven together that will protect you in case of an accident with the same performance as full leathers, but without compromising on comfort.

DOUBLELAYER AAA**

SPECIFICATIONS:

- Outer material:**
- TRI-STRETCHER® PRO 4.0 DENIM (Dyneema® (UHMWPE), Cotton, Nylon, Elastane)
- Protection:**
- Aramid fibers lining in knees and seat made with Kevlar® by progressive DuPont™ technology
 - CE level 2 protectors for hips and knees
 - Knee protectors adjustable in height
 - Dyneema® denim
 - Triple outseam stitching
- Ergonomic features:**
- 2 front pockets, 2 back pockets, 1 front side secret pocket

TRI-STRETCHER® PRO 4.0 DENIM is a mix of synthetic polymer fibers with Polyethylen base (UHMWPE). Together with aramid is used for DOUBLE LAYER TON-UP 2.0 AAA jeans

Dyneema® is one of the strongest materials in the world. It's an ultra-high-molecular-weight polyethylene which is 15 times stronger than steel. Denim with Dyneema® creates much stronger and more durable motorcycle jeans.

Kevlar® and DuPont™ are trademarks or registered trademarks of E.I. du Pont de Nemours and Company.

TRI-COMF® is developed so that it's aramid part Kevlar® by DuPont™ protects against abrasion and provides maximum body protection. The second part of this fiber is Lycra®, guaranteeing the greatest comfort on the motorcycle and beyond. At the bottom of the fabric, is the final component Coolmax®, a hydrophobic material that, increases the thermal regulation of your body and prevents from sweating.

Kevlar® and DuPont™ are trademarks or registered trademarks of E.I. du Pont de Nemours and Company.

TRI-STRETCHER® PRO 5.0 DENIM is a modern fabric which is the future of riding. Made from a mix of Materials from the polyamide family like Nylon and aromatic polyamides like Aramids or polyurethane made from Elastane, which includes natural cotton fabric. That's unique for its amazing strength while still being light in weight. TRI-STRETCHER® PRO 5.0 DENIM is one clever „team“ of different fibers woven together that will protect you in case of an accident with the same performance as full leathers, but without compromising on comfort.

TRI-STRETCHER® PRO 5.0 DENIM is a modern fabric which is the future of riding. Made from a mix of materials from the polyamide family like Nylon and aromatic polyamides like Aramids or polyurethane made from Elastane, which includes natural cotton fabric. That's unique for its amazing strength while still being light in weight. TRI-STRETCHER® PRO 5.0 DENIM is one clever „team“ of different fibers woven together that will protect you in case of an accident with the same performance as full leathers, but without compromising on comfort.

TRI-COMF®

TRI-COMF® is developed so that it's aramid part Kevlar® by DuPont™ protects against abrasion and provides maximum body protection. The second part of this fiber is Lycra®, guaranteeing the greatest comfort on the motorcycle and beyond. At the bottom of the fabric, is the final component Coolmax®, a hydrophobic material that, increases the thermal regulation of your body and prevents from sweating.

COMES IN 3 DIFFERENT SHAPES:

FINE

FOR STRAIGHT FIGURES WITH JEANS TOO TIGHT IN THE WAIST

Do you have straight waist, slim hips, and thighs? ...**FINE** shape is your choice. It will give you the right shape of your bum and it does not stress your belly.

REGULAR

THE WAIST WILL FIT PERFECTLY AND LEGS WILL LOOK LONGER

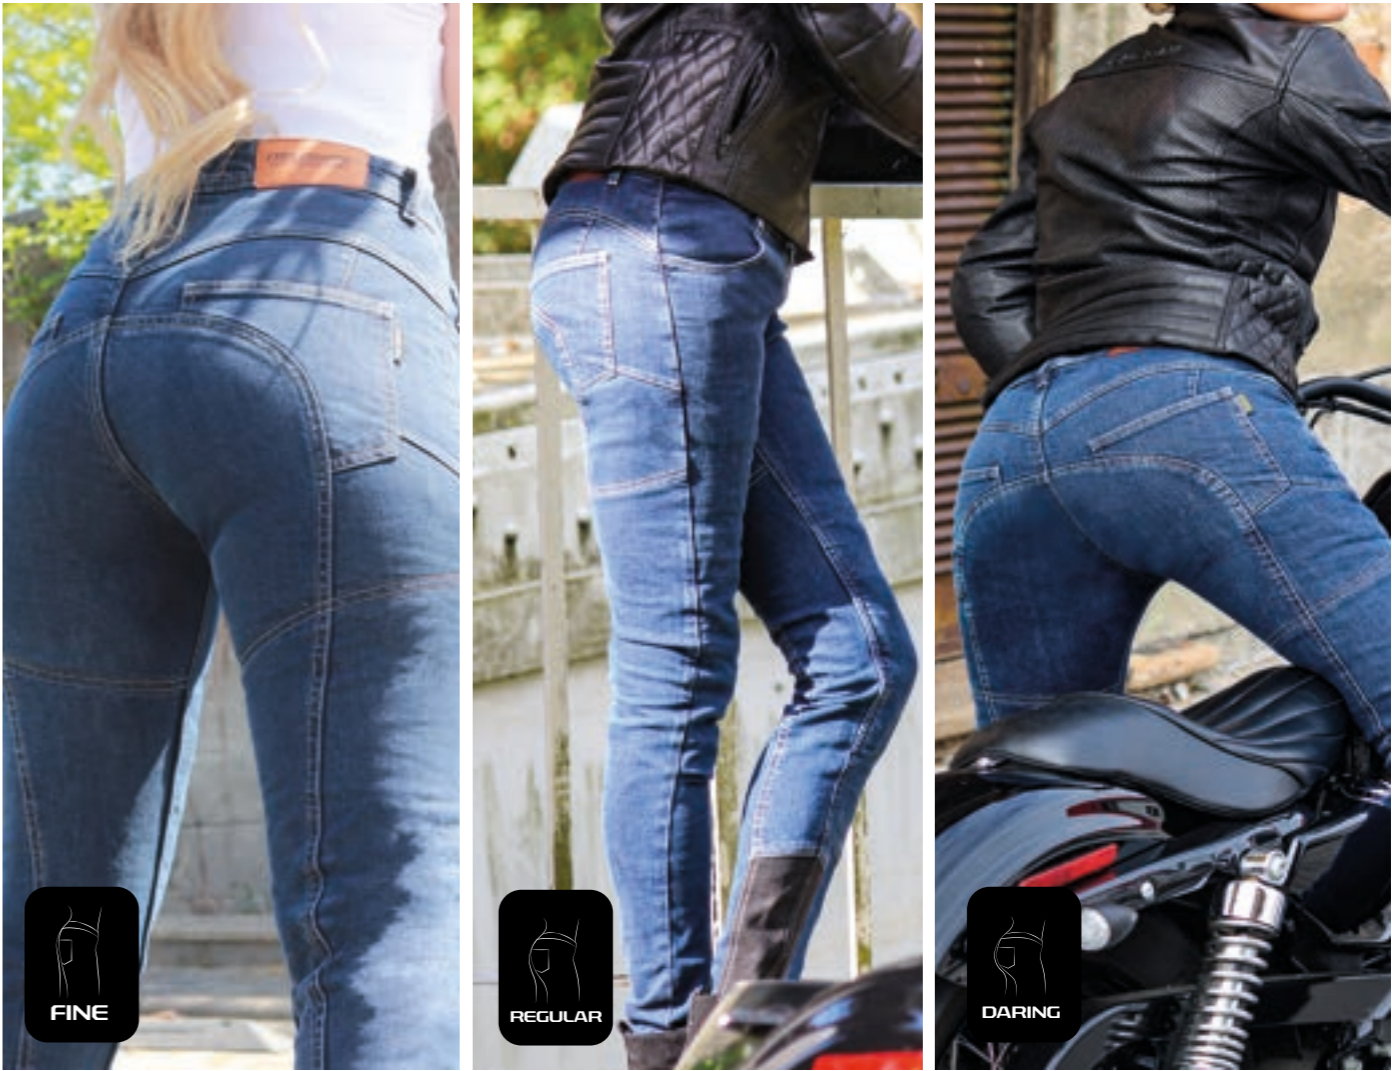

Are you evenly proportioned from waist to thighs? ...**REGULAR** shape is your choice. It will give you the right shape of your bum and the legs will appear slightly longer.

DARING

NO MORE GAP IN THE BACK THANKS TO HIGHER BACK RISE

Do you have defined waist, fuller hips and thighs? ...**DARING** shape is your choice. Thanks to the higher waist, you will not see the gap in the back and your bum will look great.

Kevlar® and DuPont™ are trademarks or registered trademarks of E.I. du Pont de Nemours and Company.

No matter how your body curves are...Allshape jeans will fit!

 - Super strong aramid lining inside for protection
 - Touchscreen compatible
- Ergonomics and Comfort:**
- Pre-curved fingers

- Stretch panels on fingers
 - 4-way stretch spandex
 - Adjustable velcro strap closure around the wrist
 - Smart mesh
 - Practical puller for easier wearing
- Other Features:**
- Soft inserts
 - Trilobite® emboss logo details on back for branding & fashion
 - Elastic/soft mesh between fingers for comfort & ventilation
 - Vintage look with classic dirty wax finish for fashion
 - Adjustable velcro strap closure
 - Ergonomic size fitting

SIZES:
• MEN S | M | L | XL | 2XL | 3XL | 4XL

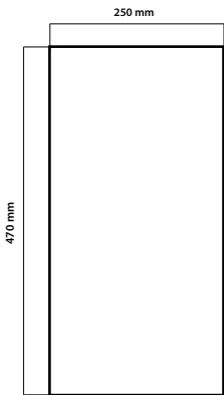

NECKTUBE

SPECIFICATIONS:

- Comfortable elastic tube made of polyester microfiber

POSSIBILITIES OF USE:

- **NECKTUBE**
- face mask
- head band
- scarf
- cap
- balaclava
- bandana
- blindfold
- beanie
- wrist band

MOTORCYCLE JEANS

WHO WE ARE AND WHAT WE DO?

Proudly presenting Trilobite® motorcycle jeans, the Czech brand of unique motorcycle apparel deeply focused on safety, comfort, and design. Since 2012, we have grown to become a highly recognized brand with consumers and motorbike riders from all over the world. By today we are represented in more than 25 countries through our distributors or direct dealers.

We innovate

Innovative materials, which we develop ourselves in collaboration with leading textile manufacturers, European test laboratories and CE certification institutes. Modern sewing techniques ensure top quality products that every rider enjoys.

We listen

Listening to the needs of actual riders, following the trends, and keeping up with the most advanced technologies in the world production of the motorcycle garments are the small steps to make one great Trilobite® product.

Still growing

Over the years Trilobite® has gained many loyal customers around the world and the Trilobite® family has been steadily growing.

We care

We have a lot of benefits to offer, not only premium products but also perfect service which we consider as standard.

ADVANTAGES OF OWN FACILITIES

WE UNDERSTAND JEANS

Our smaller Czech stitching unit located in the same facility as Trilobite® development department gives us new experience every day on how to properly sew jeans. We precisely measure, cut and sew, based on our own cuts with great attention to detail. Handcrafted, tradition and a good feeling from a job fine tuned to perfection. These are our values. We create the same values and quality in the production facility in Pakistan, in a large scale however.

Production flexibility

Possibility to prioritize items to be produced, possibility to affect the running production at every step.

Professional labor

A team of workers trained exclusively for Trilobite® products = faster production, perfect processing, correct technological procedure during production.

Frequent and regular contact with the production facility

Detailed view of production steps = possibility to directly control production and avoid potential errors = consistent quality.

High quality standard

Sophisticated quality control system in every production step.

Team work

No longer importer-factory relation. Trilobite® work as a team with its own production facility.

CERTIFICATION

In 2020, the European Union established the new certification standard EN 17092 and thus changed the way users view their safety when riding a motorcycle. New standards are becoming more and more familiar to users, but repetition is the mother of wisdom. That is why we have prepared this overview for you, thanks to which you can easily find out what level of safety you need for your type of motorcycle and riding style.

The EN 17092 certification standard is divided into several groups depending on the level of comfort and safety of the clothing. The resulting values are indicated to the user using the designations "A", "AA" and "AAA", where "A" is the lowest degree of protection and "AAA" the highest. The red CE label is supplemented with a biker pictogram.

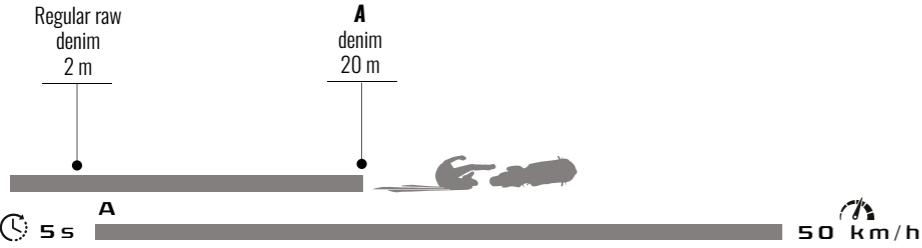

TRILOBITE®
MOTORCYCLE JEANS

CE CERTIFICATIONS OF CLOTHING
- PPE FOR MOTORCYCLE USAGE

Clothing marked "A"

Clothing marked "A" using test methods according to EN 17092-4:2020 provides basic protection of the rider against impact and abrasion. Such clothing is very comfortable and light, as it is mostly made of one layer of fabric without reinforcement (for example, using Kevlar®). You should also get this garment at a very affordable price. It is suitable for everyday use in the city when you do not expect to drive at high speed.

Slide time and distance of level "A"

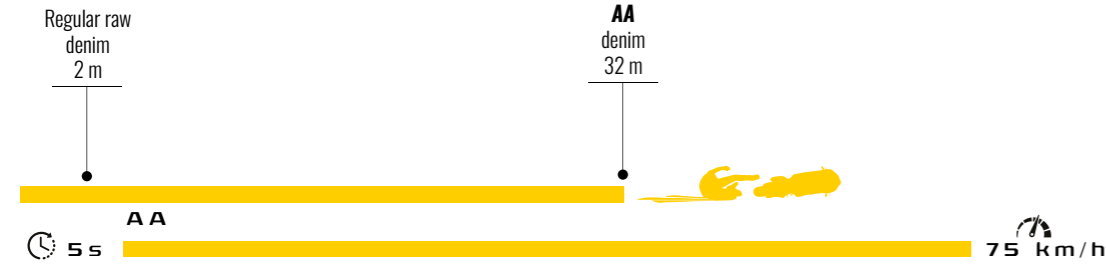

Distance resistance comparison using the CE-13595-2 standard (8m/s). Slide time and speed comparsion using new EU standard EN 17092:2020.

You won't find many such clothes in the Trilobite® portfolio. We focus on high class clothing using sophisticated materials.

Clothing marked "AA"

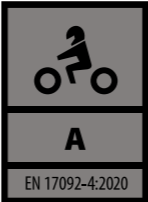

Clothing bearing the "AA" label, tested according to EN 17092-3:2020 provides a higher level of protection. These clothes are made using reinforcing materials (e.g. Kevlar®), special fabrics that are composed of several types of fibers or sandwich (several layers of materials). The clothes will still be comfortable, but they will weigh more. It is suitable for everyday use in the city, but also for touring. In particular, leather products marked "AA" are also suitable for use on the circuit.

Slide time and distance of level "AA"

Distance resistance comparison using the CE-13595-2 standard (8m/s). Slide time and speed comparsion using new EU standard EN 17092:2020.

You will find most of Trilobite® garments in this segment, marked and CE Certified as „AA“.

CE CERTIFICATIONS OF CLOTHING
- PPE FOR MOTORCYCLE USAGE

Clothing marked "AAA"

The "AAA" designation, tested according to EN 17092-2:2020, provides the highest level of protection for the highest level of risk. This clothing provides maximum protection, but at the same time it is more robust, heavier and usually less comfortable to wear. Examples are garments made of special materials or leather racing suits. They are suitable for very fast driving and at the same time for driving on the track.

Slide time and distance of level "AAA"

Distance resistance comparison using the CE-13595-2 standard (8m/s). Slide time and speed comparsion using new EU standard EN 17092:2020.

Trilobite® team develops special fabrics that meet the strictest requirements of CE testing.

Other certifications

All materials used in the production of Trilobite® clothing also meet other, no less important, tests:

- ISO 13937-2
Properties of flat textiles during tearing
- ISO 12947-2
Determination of abrasion resistance of flat textiles

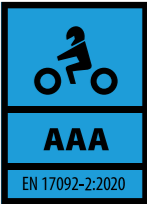

- ASTM D3107
Standard Test Methods for Stretch Properties of Fabrics Woven from Stretch Yarns
- ASTM D1424
Standard Test Method for Tearing Strength of Fabrics by Falling-Pendulum

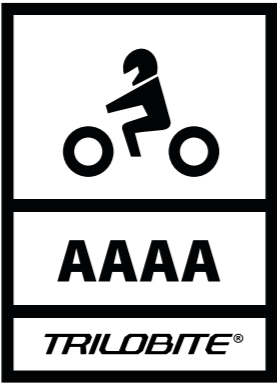

PROTECTORS
CE level 2

Our products are equipped with removable CE level 2 certified protectors. This high-quality protectors offer excellent safety functions when riding a motorcycle. Protectors will guarantee maximum impact protection.

Slide time distance and RPM
of level "AAAA"

TEXTILE ENGINEERING

Let us introduce you some of our technologies we use in our products. At Trilobite®, we recognize 3 crucial elements, **SAFETY** / **COMFORT** / **STYLE**. Everytime we make new product we try to find their right balance.

Trilobite® team knows very well that everyone wants to ride **SAFELY**. However, there are more and more bikers who prefer to ride in **STYLE**, but at the end, most bikers prefer their riding **COMFORT**.

We are here to answer any technical question any biker or Trilobite® customer might have regarding our product range. Whatever the riders are searching for in the world of motorcycle apparel, they will always find it in the Trilobite® range.

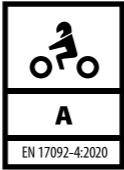

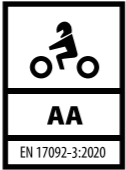

Our mission:

During last two years Trilobite® invested in textile engineering and development a lot of financial resources. We designed and developed many fabrics with our partners, some of them made it into mass production, others ended up in a dead end. We tested in laboratory a lot of diferent fabrics. We are continuously looking for the uncompromised quality, affordable price and the highest level of safety in denim fabric in the world.

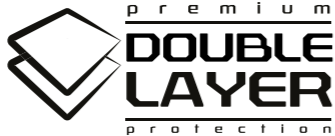

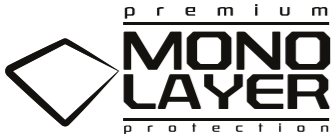

SAFETY and COMFORT or COMFORT and SAFETY? And what about STYLE?

Where is the difference? **STYLE** is easy to choose in the Trilobite® collection. Simply according to what you like. Let's look a bit more in depth at the remaining **SAFETY** and **COMFORT** features.

SAFETY, mirrored in the EN 17092-2-2020 homologation test, tells us that the safest trousers are those that pass the highest certification level, i.e. AAA. One of the elements of the tests, besides tear and seam strength, is abrasion resistance.

It is abrasion resistance that can be higher in a Doublelayer sandwich construction than in a Monolayer fabric, even though the jeans concerned pass the highest AAA standard AAA. If the certification took this into account, an AAA+ or even a AAAA class would be created.

As such, **COMFORT** is perceived differently by each rider according to their physical needs. But comfort is mainly affected by the climatic conditions in which you ride and also by the frequency of riding.

Some people prefer jeans for cooler or rainy weather and choose Trilobite® Probut X Factor that are equipped with a removable waterproof membrane with thermo layer.

On the other hand, if we are talking about riding in warmer or even tropical weather, many will choose the novelty of the Monolayer, jeans made from a mono-layer fabric that combine all features in one layer.

So what do you choose ? Monolayer AAA or Doublelayer AAA ? Or just AA but with different advantages? All are safe and all offer comfort.

They differ in the small details that are crucial for Trilobite® motorcycle jeans development, engineering and production.

There is something for everyone in the Trilobite® 2025 collection.

WE UNDERSTAND JEANS

Unique fibers family developed by Trilobite®

Our vision:

Monolayer - the future of motorcycling

Monolayer jeans are made by weaving abrasion resistant fibers with other functional fibers into one actual layer, instead of the layers being placed on top of each other. This creates a monolayer fabric.

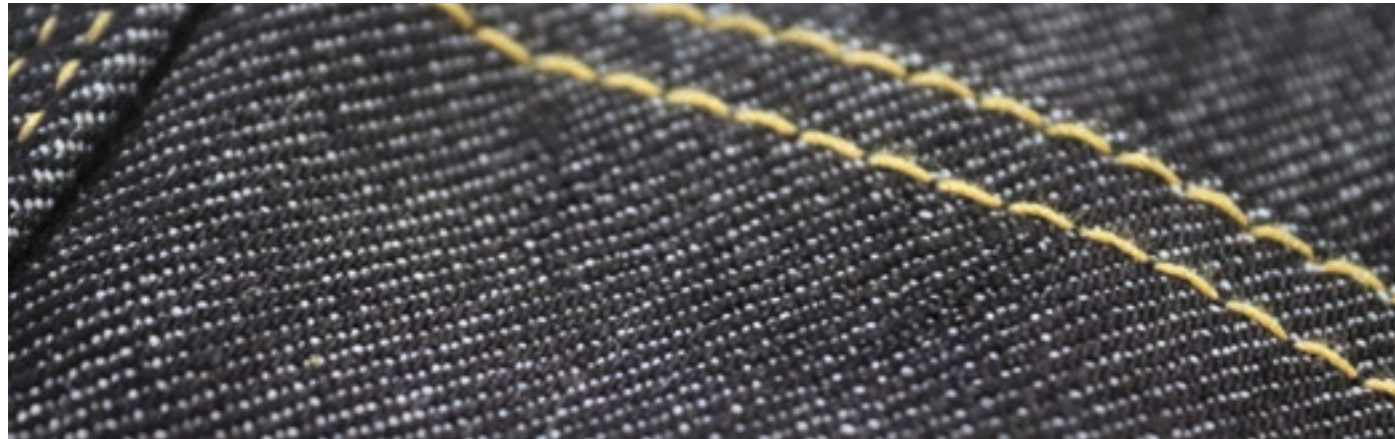

TRI-STRETCHER® PRO 5.0 DENIM
PREMIUM MONOLAYER PROTECTION

Our podium: Unique material – TRI-STRETCHER® PRO 5.0 DENIM
PREMIUM MONOLAYER PROTECTION

The whole challenge is to develop a fabric that will bring comfort, safety and at the same time meet demanding requirements in the final product cut, wear, tear, abrasion and chemical resistance during CE certification tests. TRI-STRETCHER® 5.0 is a special mix of Aramid, Nylon, Polyester, Cotton and Lycra patented by Bikers Crown Ltd., the sole owner and designer of Trilobite® motorcycle jeans. With recent breakthroughs in synthetic fibres, motorcycle riding jeans can be made lighter than ever.

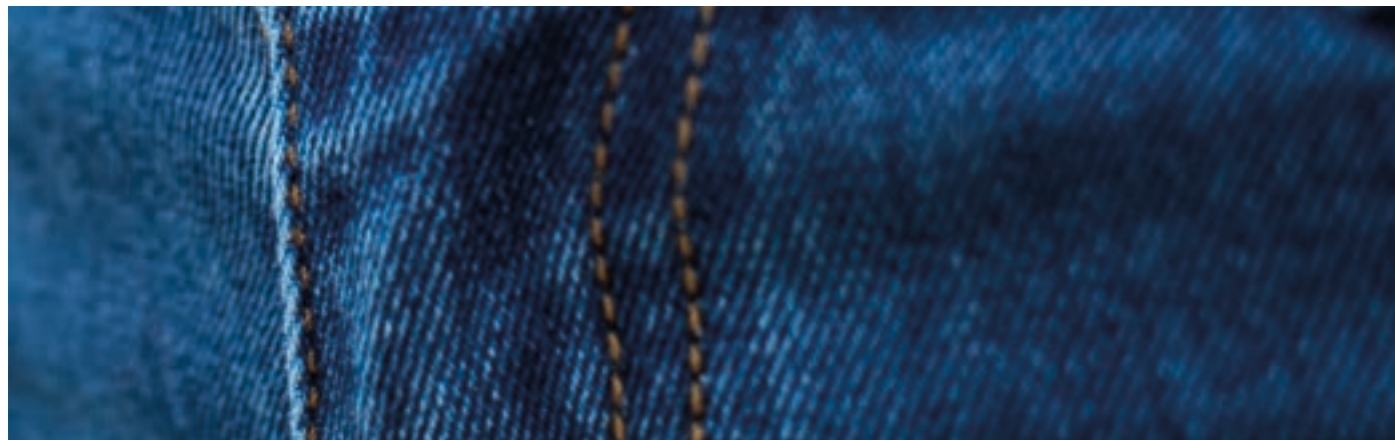

New generation of synthetic and polyethylene fibers makes it possible to blend Polyester, Nylon, Elastane and other yarns, like natural, into a completely new, sophisticated fabric for the production of Trilobite® motorcycle jeans. TRI-STRETCHER® 5.0 is a modern fabric which embodies the future of riding. Made from a mix of materials from polyamide family (their synthetic polymer) like Nylon and aromatic polyamides like Aramids or Polyurethane made from Elastane including natural cotton fabric. That's unique for its amazing strength while still being light in weight. Some parts of the structure are stronger than steel, some lighter than water, and some of them are stretchable. TRI-STRETCHER® 5.0 is one clever „team“ of different fibers woven together that will protect you in case of an accident with the same performance as leather, but without compromising on comfort.

TRI-STRETCHER® PRO 4.0 DENIM

material

TRI-STRETCHER® PRO 4.0 DENIM is a mix of synthetic polymer fibers with Polyethylen base (UHMWPE). Together with aramid is used for DOUBLE LAYER TON-UP 2.0 AAA jeans.

TRI-STRETCHER® PRO 2.0 DENIM

material

TRI-STRETCHER® PRO 2.0 DENIM is a completely new composition in a mix of Dyneema®, Elastane, Polyester, Nylon and Cotton. Despite its great lightness, breathability and flexibility, this newly mixed denim has a high dose of abrasion resistance and strength.

TRI-STRETCHER® FABRIC material

A completely new composition in a mix of DYNEEMA®, Elastane, Polyester and Cotton. Despite its great lightness, breathability, and flexibility, this newly mixed denim has a high level of abrasion resistance and strength.

Dyneema® Denim, in majority, is a mix of Polyethylene fiber with Cotton. Dyneema® yarn is based on a Ultra High Molecular Weight Polyethylene (UHMWPE) which is manufactured using a special spinning process resulting in a fiber that has an extreme high crystallinity with following properties:

EXTREME HIGH TENSILE STRENGTH - Depending on the Dyneema® content in the denim, it is extremely difficult to tear or break the fabric. It is claimed to be 15 times as strong as steel.

HIGH CUT RESISTANCE - Denim that contains more than 5 - 10% Dyneema® will have noticeably higher cut resistance compared to regular fabrics.

ABRASION RESISTANCE - Using half the amount of Dyneema® improves the abrasion resistance of a single-layer motorcycle denim with aramid by 70%. The like-for-like improvement is 300%.

CHEMICALLY INERT - Even though Dyneema® itself is chemically inert and therefore resists almost all types of chemicals, it is not recommended to bleach, nor dry-clean denim with Dyneema® to prevent quality issues related to the Cotton fiber in the denim.

HEAT SENSITIVE - Dyneema® has a melting temperature of 140 - 144°C and therefore any exposure to temperatures higher than 130°C, even for short periods (seconds) should be avoided. Hence the recommendation to iron at max 110°C / 230°F and tumble dry at low temperatures.

Tri-Base®
with Protex-M
inside

Polyester
(Non-FR)

Rayon
(Non-FR)

Self-extinguishes when flame
source is removed

Fire spreads even after flame source is removed

30 seconds after flame source is removed

TRI-BASE®
material

TRI-BASE® is a material which combines Dupont™ by progressive Kevlar® trechnology, Protex-M fibers, Cotton and Lycra®. Thanks to this composition of materials, strength, flame retardancy, heat resistance and comfort are achieved.

Special fibers of Protex-M inside TRI-BASE® fabric prevent the flame spread and the ability to stop combustion. When the flame source is removed Protex-M has a self-extinguishing nature by which combustion stops immediately. When thermoplastic fibers such as polyester and nylon melt, they produce hazardous high-temperature droplets that could cause severe burns to the skin. Protex-M melt-resistance and carbonization attribute not only to extinguishing the fire but also play an important role in preventing secondary injuries.

Protex is a high performance inherently flame retardant self-extinguishing fiber. Its advanced FR properties when blended with non-FR fibers improve their overall performance.

Key advantages of this Protex-M material are:

- **INHERENTLY FLAME RETARDANT** - Protex-M is inherently flame retardant product in which the fiber resin itself contains the flame retardant ingredient. When the flame source is removed fiber has a self-extinguishing nature by which combustion stops immediately. Unlike FR treatments, there is no deterioration in flame retardanacy after repeated washing or normal use over time.
- **MELT RESISTANT** - using of Protex-M fibre stops the spread of the fire and extinguishes it with the char barrier which forms when the flame source appears is removed. Unlike other thermoplastic fibers, such as polyester, Protex does not melt or form droplets that could stick to skin and cause injury.
- **HIGHLY BLENDABLE** - the superior properties of Protex-M allow for blending with flammable fibers in various combinations to achieve a high level of FR performance.
- **EASY PROCESSING** - Protex-M can be blended with other fibers for blending or in various fabric combinations. In most cases it can be processed under the same conditions as conventional acrylic fiber.
- **SOFT AND LIGHT** - Protex-M is light, warm, soft and flexible due to its unique fiber form.

PROTECTIVE LINING made with Kevlar® by DuPont™ technology
material

DuPont™ KEVLAR® is an organic fibre in the aromatic polyamide (aramid) family. The chemical structure of para-aramids distinguishes them from other commercial man-made and natural fibers and gives KEVLAR® its unique properties. It has high strength, high modulus (stiffness), toughness and thermal stability. In addition, it is resistant to many of the chemicals and solvents encountered in today's industrial environment. This combination of properties makes it an exceptional fibre for use in tyre reinforcement, ballistics applications, ropes and cables, and in protective apparel where high strength, and thermal, puncture, and cut resistance are required.

BETTER, STRONGER AND SAFER WITH KEVLAR® FIBER

Versatile and strong, Kevlar® fiber is more than just a series of threads. DuPont™ Kevlar® fibers are used in a variety of clothing, accessories, and equipment to help make them safer and more durable. With five times the strength of steel based on an equal weight basis, it's the go-to fiber for protective apparel and accessories.

- original aramid fiber by the progressive DuPont™ technology which is distinguished by strength and abrasion resistance
- tear resistance
- a high melting degree (450°C) ensures safety in case of high frictional temperature

CORDURA® DENIM WITH COOLMAX® material

12.5 oz Cordura® denim with COOLMAX® fibers

CORDURA® Denim fabric helps the jeans last longer than traditional 100% cotton denim. CORDURA® Denim fabric retains an authentic look and feel of cotton denim, but with added abrasion resistance and toughness. Jeans made with CORDURA® Denim fabric are exceptionally durable without compromising on comfort and style. Ride style and ride safely in TRILOBITE® - jeans made with CORDURA® Denim fabric.

The main advantage of CORDURA® denim fabric is its extreme durability, tearing, and abrasion resistance. At the same time, it offers the feel and look of classic denim, therefore it gives the civil look to the apparel.

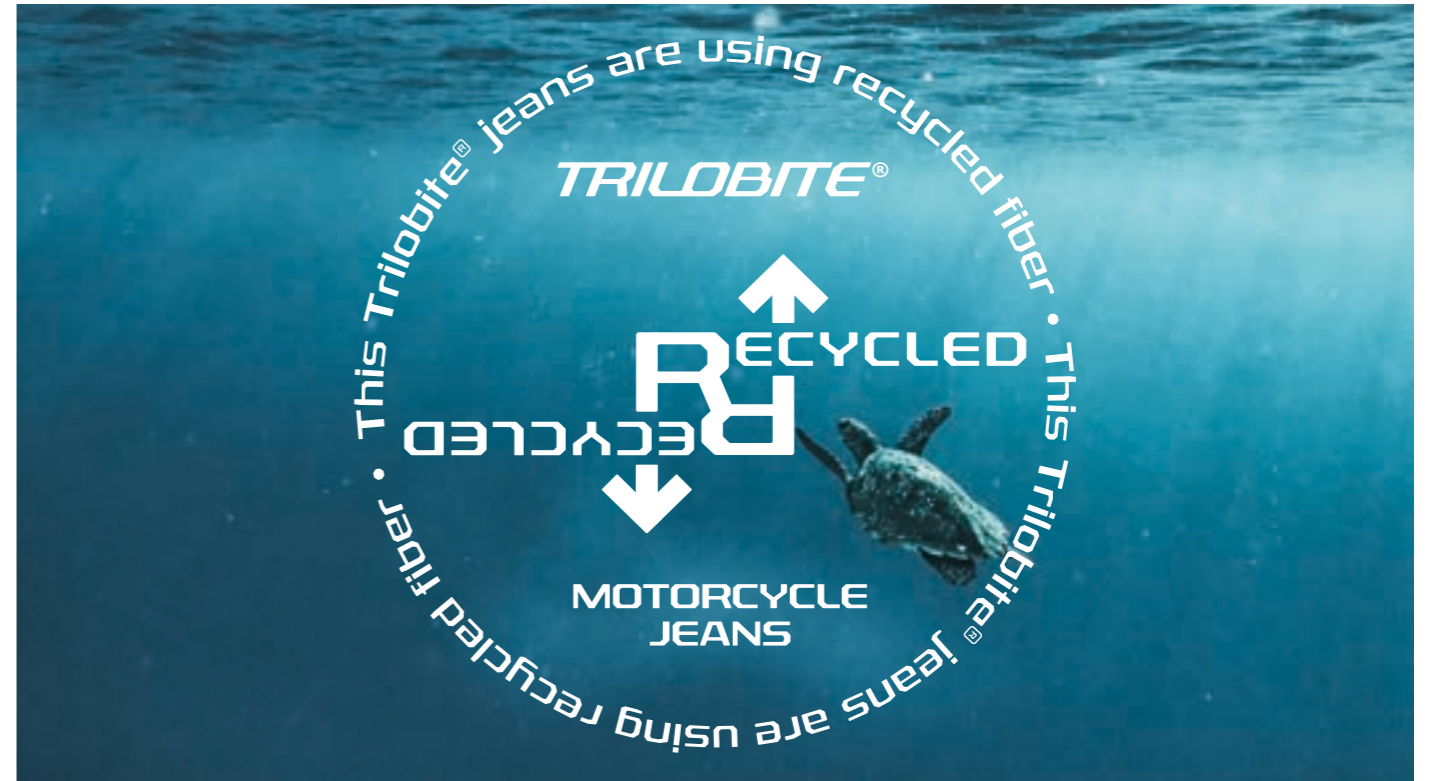

COOLMAX® technology is engineered for everyday comfort and performance. It has added cooling and drying performance to CORDURA® denim fabric. Adding the COOLMAX® fibers in denim means creating the moisture outlet system inside the fabric. This fiber system takes the moisture to the upper layer of the fabric which allows the rider to stay cool, dry and feel more comfortable when it comes on hot days.

Additional key benefits of CORDURA® Denim fabric include:

The authentic look and feel of traditional 100% cotton denim.

Exceptional abrasion resistance - Four times more resistant to abrasion than standard 100% cotton denim fabric.

The heritage of the CORDURA® brand which has proven performance in many of the world's toughest environments.

TRILOBITE® RECYCLED material

TRILOBITE® RECYCLED STANDARDS

Trilobite® target is to change the conventional way of motorcycle apparel production. While in the sports apparel industry it is nowadays quite common to use recycled materials for garment production, especially in ski & snowboard technical apparel, in the motorcycle apparel industry it is a unique approach.

Trilobite® was probably one of the first motorcycle apparel brands which used recycled materials for garment production.

Although Trilobite® is a motorcycle technical apparel maker, we still keep in mind the importance of a clean environment. We know it is not necessary to use natural resources in a careless way. Using waste as a raw material allows minimizing the consumption of natural resources. Trilobite® commits to help save the planet.

Trilobite® Premium Aramid Fashion future goal is to produce motorcycle apparel from 100% recycled materials.

In this collection Trilobite® came to the market with products, which contain either Recycled Polyester or Recycled Cotton. Using recycled cotton helps to reduce the use of virgin Cotton, and thus the significant water, CO2 and other impacts from cotton farming. The pre-consumer Cotton from industry and post-consumer Cotton from discarded clothes goes to grinding process and then raw material is made again. After that, the raw material is processed into yarn and the yarn is turned into recycled Cotton.

Besides recycled Cotton, Trilobite® also uses recycled Polyester. By integrating 100% recycled polyester fabrics in garments Trilobite® is keeping bottles and other plastics out of the ocean. By taking 70 bottles out of the ocean we get 1 kg of recycled polyester. 14 bottles collected from the ocean to be used during the production of 1 Trilobite® jacket for the lining. Besides, we help to save also the energy because the energy consumption during the production of recycled Polyester is less than what is needed to produce the virgin Polyester. In particular, it takes up to 53% less energy.

Trilobite® wants to keep our planet clean!

UNIVERSITY MICROFILMS

TRI-COMF®
material

PROTECTION / COMFORT / TEMPERATURE CONTROL

The newly developed TRI-COMF® fiber has an advantage of obtaining the highest ratio of safety and maximum comfort. This textile 3-component composition is adapted and developed so that its aramid part Kevlar® by DuPont™ protects against abrasion after falling from a motorcycle, and thus provides maximum body protection. The second part of this fiber is a flexible element Lycra®, guaranteeing the greatest comfort in every movement on the motorcycle and beyond. At the bottom of the TRI-COMF® fabric, which faces the body, is the third and final component of Coolmax®, a hydrophobic material that, thanks to its ability to wick moisture, increases the thermal regulation of your body - thus prevents from sweating.

Kevlar® and DuPont™ are trademarks or registered trademarks of E.I. du Pont de Nemours and Company.

Trilobite® appreciates its customers by offering the Trilobite® Crash Program.

Any rider wearing the Trilobite® motorcycle apparel during a traffic accident, damaging its motorcycle Trilobite® clothing, has a chance to receive brand new items. You can get a FREE new jeans!

It is very simple!

Please, fill out the form on website www.trilobitemoto.com including the description of the accident and photo documentation. Submit the form with your contact information, and send us the damaged item to our headquarters.

Our team of experts will analyze the clothing after the accident, and our customer support will contact you regarding the new item.

Our philosophy is clear. We do not sponsor any sport riders, we sponsor regular people riders just like you, who by riding in our Trilobite® clothing give us the feedback about the performance of our products. On return, we give the new clothing with our thank you note.

Please send us the damaged item to this address:

Bikers Crown Ltd.

CRASH STORY

"I took a pair of your Probut X-Factor pants with me on a 2 week tour of Peru, where I low-sided my bike in a turn, sending both me and the bike sliding across the pavement and down a ravine. Thanks to your gear, I walked away without a scratch! Please extend my thanks to all your engineers and designers for literally saving my skin."

- our customer Andrew

SIZE CHARTS

Following pages carry all size charts. In order to find the right size, keep in mind that it is important to measure your body. Take your tape measure and measure yourself like you see on the picture. Based on the measurement, find the right size on the chart. We believe that with the correct measurement and the size charts you will be able to find perfect size of our product which provides the proper function of Trilobite® motorcycle apparel.

All dimensions are in cm.
We can provide a size chart for a specific product upon request.

Men's & women's inseam

Inseam length available in the Trilobite® product collection.

All dimensions are in cm.
